

HARMONY IN IT RELOCATIONS

A successful data center relocation project – one that is completed as planned, on time and without any negative impact on business operations – requires tight collaboration and expert orchestration.

CTRL+V's extensive data center relocation expertise – from preliminary planning discussions through logistics and final execution of the project – yields unmatched service delivery regardless of whether you are moving down the street or halfway across the world.

Certified project managers, specially trained engineers, proprietary technologies and robust toolsets add value at every stage of the relocation. Centralized knowledge and proven methodologies enable CTRL+V to deliver successful projects in short time frames, providing customers with a safe, swift and seamless relocation experience.

Relocation projects can be expanded to include additional CTRL+V services such as equipment and/or cable audits, pre-cabling, ITAD/Recycling & data destruction, among others.
